**IN THE CLAIMS:** 

A complete listing of the claims is set forth below. Please amend the claims as

follows:

1. (Currently Amended) A system for managing a value chain, comprising:

a planning application operable to receive planning data from a plurality of

entities included in a value chain and to automatically generate a plan according to the

planning data, at least two of the entities not directly communicating planning data to

one another; and

a manager application operable to:

receive the plan and automatically identify one or more exceptions in the

plan;

communicate planning data relating to the exceptions to one or more of

the entities;

receive instructions from one or more of the entities regarding how the

exceptions are to be resolved; and

automatically modify the planning data in response to the instructions.

2. **(Withdrawn)** The system of Claim 1, wherein:

the planning application is further operable to automatically generate an updated

plan according to the planning data modified by the manager application; and

the manager application is further operable to communicate the updated plan to

the entities in the value chain.

3. (Withdrawn) The system of Claim 1, wherein the manager application is

further operable to:

receive updated planning data from one or more of the entities; and

automatically identify potential exceptions that may be caused by the updated

planning data without receiving an updated plan from the planning application.

4. (Withdrawn) The system of Claim 1, wherein the manager application is

further operable to:

automatically communicate a notification regarding the existence of an exception

to one or more of the entities;

receive a request for information about the exception from one or more of the

entities in response to the notification;

automatically communicate planning data relating to the exception to one or

more of the entities in response to receiving the request.

5. (Withdrawn) The system of Claim 1, wherein the manager application is

further operable to control access to the planning information based on a permissibility

framework.

6. (Original) The system of Claim 1, wherein the planning application

comprises a supply chain planning engine, the plurality of entities comprise enterprises,

and the plan comprises a supply chain plan for at least a portion of a supply chain

including the enterprises.

7. (Original) The system of Claim 1, wherein at least one of the exceptions

comprises an excess or lack of supply of an item.

Response to Office Action Attorney Docket No. 020431.0738 Serial No. 09/941,960 Page 3 8. (Original) The system of Claim 1, wherein the planning data comprises

data selected from the group consisting of demand data, supply data, inventory data,

and capacity data.

9. (Withdrawn) The system of Claim 1, wherein the planning application is

further operable to:

receive set-up information from one or more of the entities, the set-up information

including characteristics of the value chain; and

automatically generate the plan according to the planning data and the set-up

information.

10. (Original) The system of Claim 1, further comprising an electronic

marketplace that supports the planning application and the manager application.

11. (Original) The system of Claim 10, wherein the marketplace comprises a

web server operable to communicate the planning data relating to the exceptions to one

or more entities in the value chain.

12. (Currently Amended) A method for managing a value chain, comprising:

receiving planning data from a plurality of entities included in a value chain, at least two of the entities not directly communicating planning data to one another;

automatically generating a plan according to the planning data;

automatically identifying one or more exceptions in the plan;

communicating planning data relating to the exceptions to one or more of the entities;

receiving instructions from one or more of the entities regarding how the exceptions are to <u>be</u> resolved; and

automatically modifying the planning data in response to the instructions.

13. **(Withdrawn)** The method of Claim 12, further comprising:

automatically generating an updated plan according to the modified planning data; and

communicating the updated plan to the entities in the value chain.

14. (Withdrawn) The method of Claim 12, further comprising:

receiving updated planning data from one or more of the entities; and

automatically identifying potential exceptions that may be caused by the updated planning data without updating the plan according to the updated planning data.

15. **(Withdrawn)** The method of Claim 12, further comprising:

automatically communicating a notification regarding the existence of an

exception to one or more of the entities;

receiving a request for information about the exception from one or more of the

entities in response to the notification;

automatically communicating planning data relating to the exception to one or

more of the entities in response to receiving the request.

16. (Withdrawn) The method of Claim 12, further comprising controlling

access to the planning information based on a permissibility framework.

17. (Original) The method of Claim 12, wherein the plurality of entities

comprise enterprises and the plan comprises a supply chain plan for at least a portion of

a supply chain including the enterprises.

18. (Original) The method of Claim 12, wherein at least one of the exceptions

comprises an excess or lack of supply of an item.

19. (Original) The method of Claim 12, wherein the planning data comprises

data selected from the group consisting of demand data, supply data, inventory data,

and capacity data.

20. (Withdrawn) The method of Claim 12, further comprising:

receiving set-up information from one or more of the entities, the set-up

information including characteristics of the value chain; and

automatically generating the plan according to the planning data and the set-up

information.

21. (Currently Amended) Software for managing a value chain, the software

embodied in a computer-readable medium and operable, when executed, to:

receive planning data from a plurality of entities included in a value chain, at least

two of the entities not directly communicating planning data to one another;

automatically generate a plan according to the planning data;

automatically identify one or more exceptions in the plan;

communicate planning data relating to the exceptions to one or more of the

entities;

receive instructions from one or more of the entities regarding how the

exceptions are to be resolved; and

automatically modify the planning data in response to the instructions.

22. (Withdrawn) The software of Claim 21, further operable to:

automatically generate an updated plan according to the modified planning data;

and

communicate the updated plan to the entities in the value chain.

23. (Withdrawn) The software of Claim 21, further operable to:

receive updated planning data from one or more of the entities; and

automatically identify potential exceptions that may be caused by the updated

planning data without updating the plan according to the updated planning data.

24. (Withdrawn) The software of Claim 21, further operable to:

automatically communicate a notification regarding the existence of an exception to one or more of the entities:

receive a request for information about the exception from one or more of the entities in response to the notification;

automatically communicate planning data relating to the exception to one or more of the entities in response to receiving the request.

- 25. **(Withdrawn)** The software of Claim 21, further operable to control access to the planning information based on a permissibility framework.
- 26. (Original) The software of Claim 21, wherein the plurality of entities comprise enterprises and the plan comprises a supply chain plan for at least a portion of a supply chain including the enterprises.
- 27. (Original) The software of Claim 21, wherein at least one of the exceptions comprises an excess or lack of supply of an item.

28. (Original) The software of Claim 21, wherein the planning data comprises

data selected from the group consisting of demand data, supply data, inventory data,

and capacity data.

29. (Withdrawn) The software of Claim 21, further operable to:

receive set-up information from one or more of the entities, the set-up information

including characteristics of the value chain; and

automatically generate the plan according to the planning data and the set-up

information.

30. (Currently Amended) A system for managing a value chain, comprising:

means for receiving planning data from a plurality of entities included in a value

chain, at least two of the entities not directly communicating planning data to one

another;

means for automatically generating a plan according to the planning data;

means for automatically identifying one or more exceptions in the plan;

means for communicating planning data relating to the exceptions to one or more

of the entities;

means for receiving instructions from one or more of the entities regarding how

the exceptions are to be resolved; and

means for automatically modifying the planning data in response to the

instructions.

31. (Currently Amended) A system for managing a value chain, comprising:

a planning application operable to:

receive planning data from a plurality of entities included in a value chain,

at least two of the entities not directly communicating planning data to one another;

receive set-up information from one or more of the entities, the set-up

information including characteristics of the value chain; and

automatically generate a plan according to the planning data; and

a manager application operable to:

receive the plan and automatically identify one or more exceptions in the

plan;

automatically communicate a notification regarding the existence of an

exception to one or more of the entities;

receive a request for information about the exception from one or more of

the entities in response to the notification;

automatically communicate planning data relating to the exception to one

or more of the entities in response to receiving the request, the manager application

controlling access to the planning information based on a permissibility framework;

receive instructions from one or more of the entities regarding how the

exceptions are to be resolved; and

automatically modify the planning data in response to the instructions.

32. (Withdrawn) A method for managing a value chain, comprising:

receiving planning data from a plurality of entities included in a value chain, at

least two of the entities not directly communicating planning data to one another;

receiving set-up information from one or more of the entities, the set-up

information including characteristics of the value chain;

automatically generating a plan according to the planning data;

receiving the plan and automatically identifying one or more exceptions in the

plan;

automatically communicating a notification regarding the existence of an

exception to one or more of the entities;

receiving a request for information about the exception from one or more of the

entities in response to the notification;

automatically communicating planning data relating to the exception to one or

more of the entities in response to receiving the request, access to the planning

information being based on a permissibility framework;

receiving instructions from one or more of the entities regarding how the

exceptions are to resolved; and

automatically modifying the planning data in response to the instructions.

Response to Office Action Attorney Docket No. 020431.0738 Serial No. 09/941,960 Page 11 33. (Withdrawn) Software for managing a value chain, the software embodied

in a computer-readable medium and operable, when executed, to:

receive planning data from a plurality of entities included in a value chain, at least

two of the entities not directly communicating planning data to one another;

receive set-up information from one or more of the entities, the set-up information

including characteristics of the value chain;

automatically generate a plan according to the planning data;

receive the plan and automatically identify one or more exceptions in the plan;

automatically communicate a notification regarding the existence of an exception to one

or more of the entities;

receive a request for information about the exception from one or more of the

entities in response to the notification;

automatically communicate planning data relating to the exception to one or

more of the entities in response to receiving the request, the manager application

controlling access to the planning information based on a permissibility framework;

receive instructions from one or more of the entities regarding how the

exceptions are to resolved; and

automatically modify the planning data in response to the instructions.
